## No. 127

## VOLUME TABLE

FOR

# FIR, CEDAR, SPRUCE TIMBER 

PRICE, $\$ 10.00$

SCALE BASIS:
32 FT LOGS (16 TO 108 INCHES DIAMETER)
TAPER 2 TO 12 INCHES
BASED UPON SPAULDING LOG RULE

COMPILED BY
G. G. JOHNSON

FOR
JAMES D. LACEY \& CO.
chicago, new orleans, seattle, portland, ore.

Copyright 1910
BY JAMES D. LACEY \& CO. PORTLAND, ORE.

PRESS OF
GLASS \& PRUDHOMME CO
PORTLAND, ORE.

## THIS VOLUME TABLE

is intended to aid in determining the percentages of the different grades of logs in any stand of timber. The figures given indicate the amount of lumber in trees of different sizes and forms and the percentage of the contents of each tree that is contained in each 32 -foot log in that tree.

## EXAMPLE:

Sample Tree, 128 feet or four logs in length.

| Butt Dia. | Top Dia. | Contents | Per cent. | Percent. | Per cent. | Per cent. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| in inch. | in inch. | in M ft. | 1st $\log$ | 2nd $\log$ | 3rd $\log$ | 4th $\log$ |
| 48 | 24 | 6592 | 40 | 28 | 20 | 12 |

Therefore: If a tree contains one Flooring log, two Merchantable logs and one Common log then forty per cent. of the contents of the tree is Flooring, forty eight per cent. is Merchantable and twelve per cent. is Common. Similarly, if this tree contains one 16 -foot Flooring log, two and one-half Merchantable logs and one Common log then the percentages will be 20, 68 and 12 , respectively, and so on through all the varying forms of trees.

To apply the rule in cruising, determine the percentages of the different grades as contained in a given percentage of the trees on each forty acres by selecting, for instance, an average tree on each tally and carefully determining the percentage of the different grades of logs contained in these sample trees and applying the average to all trees on the forty.

## LOG GRADES

On Puget Sound, Fir logs are classed in three grades, Flooring, Merchantable and No. 2. On the Columbia these grades are designated as No.'s 1, 2 and 3.

Flooring logs must measure not less than 30 inches in diameter at the small end and saw out $50 \%$ or more of absolutely clear, vertical-grained lumber, free from pitch pockets, heart knots and excessive twist.

Merchantable logs must be not less than 16 inches in diameter at the small end and contain only a limited number of knots, which must be tight and sound and not large enough to materially weaken the lumber.

No. 2 logs are logs lower than Merchantable in grade from which marketable, rough lumber can be cut.

On Puget Sound, where these rules have been applied, the average boom of logs grades $30 \%$ Flooring, $50 \%$ Merchantable and $20 \%$ No. 2.

Spruce and Pine are graded the same as Fir.
Cedar is graded into lumber logs and shingle logs. A lumber $\log$ must approximate $50 \%$ clear lumber and must be of sufficient size to have a well defined grain.

Hemlock, Larch, Silver and White Fir, and other classes of North Pacific Coast timber should be classed into two grades, No. 1 logs and No. 2 logs, the former being such as will cut $50 \%$ or better clear lumber and the latter such as will cut only common marketable lumber.

## SPAULDING SCALE RULE

FOR 16 AND 32 FOOT LOGS

| Diameter in Inches | Contents <br> 16 ft. Log | Contents $32 \mathrm{ft} . \mathrm{Log}$ | Diameter in Inches | Contents <br> $16 \mathrm{ft} . \mathrm{Log}$ | Contents 32 ft . Log |
| :---: | :---: | :---: | :---: | :---: | :---: |
